Professional Summary

Azure Infrastructure & DevOps Engineer with 4.9 years of experience automating and supporting enterprise cloud infrastructure across Windows/Linux and Azure environments. Proven expertise in building secure Infrastructure-as-Code (Terraform) blueprints and orchestrating containerized environments (Docker/AKS). Specialized in converting manual L3 production support into proactive operations, designing Prometheus/Grafana observability systems and event-driven Python auto-remediation loops that slash MTTR to under 10 seconds. Advanced experience building automated CI/CD quality gates inside Azure DevOps and engineering autonomous multi-agent AI execution pipelines.

Work Experience

Capgemini India Pvt Ltd (US & Canada Retail Client)

Associate Consultant (Cloud Platform Migration & Infrastructure Operations) **Oct 2024 – Sep 2026**

Project Overview: Enterprise cloud transformation migrating HP DL20 bare-metal infrastructure into Azure using Platform9/OpenStack technologies, while administering Windows Server, Active Directory, and application platforms supporting thousands of retail locations.

- Supported Azure infrastructure operations, including virtual machines, networking components, deployment validation, and production troubleshooting.
- Supported Azure DevOps pipelines, repositories, deployment coordination, and infrastructure migration workflows.
- Administered Windows Server, Active Directory, DNS, DHCP, and IIS environments supporting enterprise retail infrastructure.
- Supported IIS-hosted applications through configuration, deployment validation, health checks, and production incident troubleshooting.
- Provisioned and managed infrastructure using OpenStack CLI, working with Nova, Cinder, Heat, and Ironic services.
- Supported migration of HP DL20 bare-metal servers to Azure through Platform9/OpenStack infrastructure workflows.
- Automated recurring infrastructure and operational tasks using Bash/PowerShell, reducing manual effort and improving migration efficiency.
- Monitored infrastructure and application health using Splunk dashboards, analysing logs, alerts, and operational metrics to troubleshoot production issues.
- Supported load-balancer health checks and configuration validation during migration and application cutover activities.
- Monitored Cisco Meraki network connectivity and supported infrastructure troubleshooting.
- Supported ServiceNow PagerDuty alert integration and validated automated incident notification workflows.
- Maintained technical documentation, migration runbooks, and operational procedures using Confluence.

Key Achievements

- Developed a Bash-based automation solution to retrieve and process infrastructure/store information, reducing manual effort by approximately 90%
- Contributed to VM redeployment and infrastructure migration activities, helping reduce migration timelines by approximately 3 months.
- Supported ServiceNow PagerDuty integration and automated incident notification workflows, reducing manual operational effort.

Tech Stack:

Azure & DevOps: Microsoft Azure, Azure VMs, Azure Networking, Azure DevOps, Azure DevOps Pipelines, CI/CD Concepts, Repositories, Deployment Coordination, Cloud Infrastructure Operations.
Infrastructure & Systems: Windows, Linux/Ubuntu server, Active Directory, DNS, DHCP, IIS, Bare-Metal Infrastructure.
Scripting & Platforms: Bash/Shell Scripting, Git, OpenStack, Platform9.
Monitoring & ITSM: Splunk, ServiceNow, PagerDuty, Slack, Infrastructure Monitoring, Incident/Problem/Change Management, Security & Compliance Support, Deployment Validation.

Analyst / Senior Analyst (IT Infrastructure & Network Support) **Dec 2021 – Sep 2024**

Project Overview: Provided L3 infrastructure support and supported enterprise bare-metal migration across North American retail environments, covering deployment validation, production monitoring, networking, troubleshooting, and technician coordination.

- Provided L3 infrastructure and end-user support across North American retail environments, troubleshooting hardware, software, network, and connectivity issues.
- Supported installation, configuration, deployment, and troubleshooting of servers, desktops, endpoints, printers, peripherals, and retail IT devices.
- Troubleshot LAN/WAN, TCP/IP, UDP, and network connectivity issues and performed network validation using Cisco Meraki.
- Supported bare-metal infrastructure migration, deployment validation, production monitoring, and troubleshooting using Windows Event Viewer.
- Coordinated with field technicians for hardware deployment, replacement, connectivity troubleshooting, and incident resolution.
- Monitored production services and maintained SLA compliance through timely incident resolution.

Tech Stack:
Production Support, Infrastructure Support, Splunk, Service Now, Slack, Access Control, Certificate Lifecycle Management.

Projects

PromoMind AI — Autonomous Multi-Agent Retail Promotion Engine | Git Hub Link

- **Tech Stack:** Azure DevOps, Docker, Python, Streamlit, PyTest, SciPy Optimize, LangGraph

Engineering Impact: Engineered an automated Continuous Integration (CI) pipeline inside Azure DevOps (azure-pipelines.yml) running isolated PyTest quality gates. Bounded non-deterministic LLM logic using SciPy Optimize linear programming to defend a 15% Net Margin Floor and marketing budget parameters in Indian Rupees (₹). Orchestrated a LangGraph concurrent agent triad, dropping manual retail planning cycles from 48 hours down to less than 3 seconds.

Azure Cloud Infrastructure Blueprint via IaC | Git Hub Link

- **Tech Stack:** Terraform (IaC), Microsoft Azure, Azure CLI, Git Architecture.

Engineering Impact: Architected and deployed a multi-tier, highly available corporate virtual network topology inside the Azure Central India (Pune) data centers using Terraform. Provisioned fully segregated public web subnets and secure private application subnet zones. Engineered strict network perimeter controls using a Network Security Group (NSG) firewall to block unauthorized internet traffic, and integrated a Standard Public Load Balancer with a static public IP to eliminate operational single points of failure.

Automated Cloud Observability & Self-Healing SRE Engine | Git Hub Link

- **Tech Stack:** Terraform, Microsoft Azure, Docker Compose, Prometheus, Grafana, PromQL, Python, Webhooks.

Engineering Impact: Engineered a cost-optimized infrastructure deployment model in Azure (West US 2) using Terraform to provision Linux node architectures, network interfaces, and standardized network security perimeters (NSGs). Orchestrated a containerised telemetry stack using Docker Compose, Prometheus, and Grafana to monitor and scrape system process parameters and HTTP metrics in real time with sub-5-second sampling frequencies. Developed an unbuffered, host-level Event-Driven Python Webhook Handler linked to Grafana Alertmanager, automating non-blocking container restarts to slash Mean Time to Resolution (MTTR) from hours to under 10 seconds with zero human intervention.

Certifications

- Microsoft Certified: Azure Fundamentals (AZ-900)
- Microsoft Certified: Azure Data Fundamentals (DP-900)
- Microsoft Certified: Azure AI Fundamentals (AI-900)
